

We are i2motion

i2motion is an innovative organization consisting of people with more than 25 years of experience in the development and offering of engineered Power Drive Systems (PDS) for pump, compressor, hoist and cooling applications and systems for ships and trains. Motion and electrical motor control is our DNA.

As 'Architects in Motion' we drive integrated motion solutions co-created with our customers to become more effective, smarter, without wasting energy.

Together we create the power drive system for your specific application with our premium Fuji AC-Drive in a power range from 0,75kW up to 2MW or a dedicated designed iMotor wherein you benefit from a smaller IEC frame size, additional energy savings and reduced investments of your installation.

i2motion is the game changer for: compactness - tough environments - customization - extreme low & high ambient temperatures - efficiency - clean energy

Let us co-create your iMotor and power drive system

Experience our application know-how and leading edge product design. Feel free to contact us and meet i2i
